# upgrade from 11.10 to 12.04 - No upgrade option available in update manager

Update manger do not provide option to upgrade. It displays "Your system is up-to-date" instead. I tried Check button many times but received same message. Please help.

11.10 12.04 upgrade

@Uri: that question is more specific to 'LTS to LTS' upgra	
@david6 The answer applies here too. – Uri Herrera Mag	

## 2 Answers

NOTE: Specific to upgrade of 11.10 to 12.04 (and not from 10.04 LTS)

From: ubuntu.com - UbuntuDesktop - Upgrading - GUI method

#### Upgrading from Ubuntu 11.10

To upgrade from Ubuntu 11.10 on a desktop system, start "Update Manager". It should display the following message: "New distribution release '12.04' is available. Click Upgrade and follow the on-screen instructions".

I can confirm this works on my Ubuntu 11.10 desktop.

#### OR

From: ubuntu.com - UbuntuServer - Upgrading - command-line method

#### Upgrade

#### From 11.10 to 12.04

To upgrade from Ubuntu 11.10 on a server system, follow the steps listed below:

Install the update-manager-core package (if it is not already installed).

Run **sudo do-release-upgrade** to launch the upgrade tool. Follow the on-screen instructions. Note that the server upgrade is now more robust and will utilize GNU screen and automatically re-attach in case of dropped connection problems, for example.

#### So, type the following commands:

sudo apt-get install update-manager-core

sudo do-release-upgrade

sudo apt-get update && sudo apt-get upgrade

#### Addition: October 24, 2012 @ 4:31:50 EST

# \* This section should only be followed if you have the GUI available, and you have tried the command line to no avail. *I can confirm this resolving my own semi-similar issue.*

Poke into your System Settings, and look for '**Software Sources**'. In this window, look to the option that the black cursor is pointing to, and change it to what's shown:

🖲 🔲 Software Sources						
Ubuntu Software Other Software Up	pdates	Authentio	cation	Statist	ics	
Install updates from:						
👿 Important security updates (or	neiric-s	ecurity)				
👿 Recommended updates (oneir	ic-upda	tes)				
Pre-released updates (oneiric-	propos	ed)				
👿 Unsupported updates (oneiric	-backpo	orts)				
Automatically check for updates:	Never					r
When there are security updates:						•
When there are other updates:	isplay i	mmediate	ly			,
Notify me of a new Ubuntu versior	n: For a	any new ve	ersion	]		-
			Rev	ert	Clos	e

Update Manager should now chirp about Ubuntu 12.04.1 LTS being available. If you have access to only command line, and need to change this option, I have no idea how to do it.

I had to do an apt-get purge update-manager-core and the install update-manager-core before dorelease-upgrade would recognize any new releases for 11.10.
